## → Lab#1, NLP Spring 2023

This is due on 2023/03/06 15:30, commit to your github as a PDF (lab1.pdf) (File>Print>Save as PDF).

IMPORTANT: After copying this notebook to your Google Drive, please paste a link to it below. To get a publicly-accessible link, hit the *Share* button at the top right, then click "Get shareable link" and copy over the result. If you fail to do this, you will receive no credit for this lab!

Name: 廖采葳

## Question 1 (100 points)

Let's switch over to coding! Write some code in this cell to compute the number of unique word **tokens** in this paragraph (5 steps of Text Normalisation: 1. Lowercase Conversion, 2. Remove punctuations, 3. Stemming, 4. Lemmatisation, 5. Stopword Removal). Use a whitespace tokenizer to separate words (i.e., split the string by white space). Be sure that the cell's output is visible in the PDF file you turn in on Github.

## 按兩下 (或按 Enter 鍵) 即可編輯

```
paragraph = '''Last night I dreamed I went to Manderley again. It seemed to me
that I was passing through the iron gates that led to the driveway.
The drive was just a narrow track now, its stony surface covered
with grass and weeds. Sometimes, when I thought I had lost it, it
would appear again, beneath a fallen tree or beyond a muddy pool
formed by the winter rains. The trees had thrown out new
low branches which stretched across my way. I came to the house
suddenly, and stood there with my heart beating fast and tears
filling my eyes."
# DO NOT MODIFY THE VARIABLES
tokens = 0
word_tokens = []
# YOUR CODE HERE! POPULATE THE tokens and word_tokens VARIABLES WITH THE CORRECT VALUES!
split_paragraph = paragraph.split('
word tokens = []
#: 1. Lowercase Conversion,
for i in range(len(split_paragraph)):
   word_tokens.append(str(split_paragraph[i]).lower())
#2. Remove punctuations,
import nltk as nltk
nltk.download("punkt")
def remove_punct(token):
   return [word for word in token if word.isalpha()]
rmp = remove_punct(word_tokens)
#3. Stemming,
from nltk.stem import PorterStemmer, LancasterStemmer, SnowballStemmer
port = PorterStemmer()
stemmed_port = [port.stem(token) for token in rmp]
lanc = LancasterStemmer()
stemmed_lanc = [lanc.stem(token) for token in rmp]
snow = SnowballStemmer("english")
stemmed snow = [snow.stem(token) for token in rmp]
#4. Lemmatisation,
from nltk.stem import WordNetLemmatizer
lemmatiser = WordNetLemmatizer()
lemmatised1 = [lemmatiser.lemmatize(token) for token in stemmed_port]
lemmatised2 = [lemmatiser.lemmatize(token) for token in stemmed_lanc]
lemmatised3 = [lemmatiser.lemmatize(token) for token in stemmed_snow]
```

```
#5. Stopword Removal
# DO NOT MODIFY THE BELOW LINE!
print('Number of word tokens: %d' % (tokens))
print("printing lists separated by commas")
print(*word_tokens, sep = ", ")
